

Primary characteristics

NAF-Setball is a ball sector valve with metal-to-metal or metal-to-PTFE seating. The NAF-Setball combines the best control characteristics of the ball valve and the butterfly valve. It can be used both as a control valve and as a shut-off valve. It is available as standard in stainless steel. It is also available in other materials, such as, CG8M, Titanium, etc. Contact NAF for more information

The valve has:

- a one-piece, leak-proof stainless steel body, with face-to-face lengths in acc. with IEC standards
- a ball sector with top and bottom bearings for low operating torque, so that low-torque actuators can be used
- a V-shaped sector that provides accurate control over a wide range, even at low flow rates and if used for viscous media with high concentrations of solid particles
- a spherical area of the ball sector which, with PTFE-seat gives tight closing. The Stellite seat ring , ensures excellent tightness at all differential pressures. The maximum leakage in the direction of flow is less than 5×10^{-6} of the Kv value in this case.
- Metaloplast bearings.
- O-ring or graphite packing for the stem gland
- The standard Stellite seat can easily be converted to PTFE after turning the ball sector by 180 degrees, without the need to dismantle the valve.
- NAF standard for mounting the actuator, which simplifies installation and results in a compact valve/actuator unit

CE-marked according to Pressure Equipment Directive (PED 97/23/EG) module H, category III.
For module H1, category IV contact NAF

Applications

NAF-Setball can be used both as a control valve and as a shut-off valve, in a wide variety of applications and in different operating modes. The valve represents a concrete result of our product philosophy which is focused on functionality, high quality and low life cycle costs, and is based on concentrating our range to a limited number of valve types, but all of them suitable for a wide variety of applications.

The excellent control characteristics of NAF-Setball are particularly beneficial under severe control conditions, in difficult media and under demanding pressure conditions in the process industry, such as:

- if the media contains solid particles
- if a wide control range is required
- in control applications involving high pressure drops
- if cavitation occurs
- corrosive applications

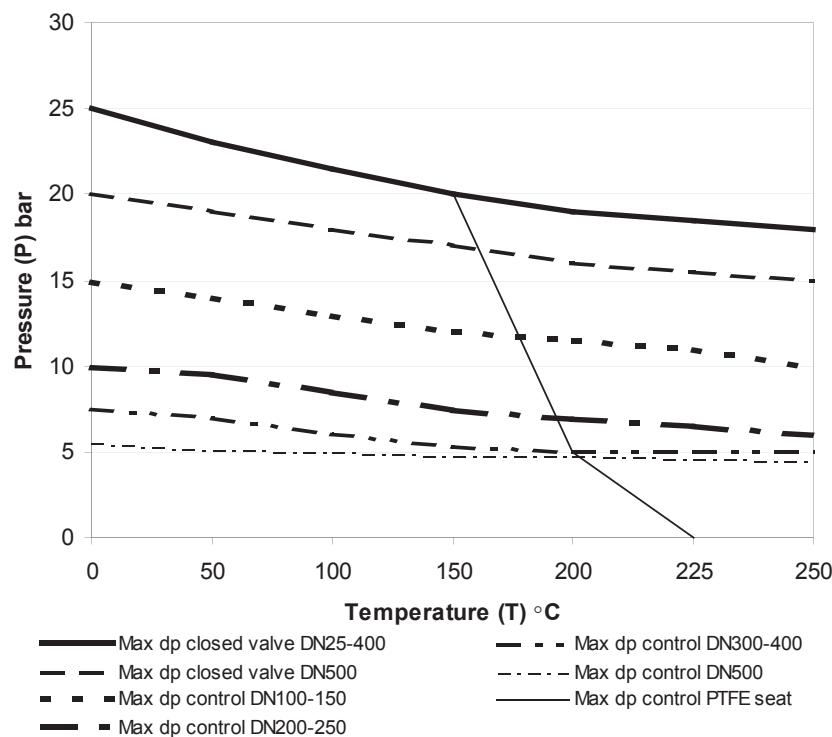

Technical specification

Material:	Stainless steel	
Size range:	DN 25-500	
Pressure ratings:	PN 10, 16, 25, 40 ANSI Class 150 and 300	
Max. differential pressures:		
valve closed	25 bar	DN 25-400
control service	20 bar	DN 500
	25 bar	DN 25-80
	15 bar	DN 100-150
	10 bar	DN 200-250

	6 bar	DN 500
	See also page 2	
Face-to-face lengths:	As per IEC 534-3-2	
Installation methods:	Wafer type (DN 25-200) Flanged (DN 25-500)	
Temperature range:	-30 - 250°C	
Test pressure:	1.5 x PN with valve open IEC 534-4 Class IV-S1 with valve closed	
Sealing class:	Testing medium is water. PTFE-seat ISO 5208-2 Rate A DIN 3230 BN Leckrate 1 Metal seat IEC 534-4 Class IV-S1.	

Working pressure, differential pressure and temperature

The maximum working pressure and temperature in the body depends on pressure class according to respectively flange standard. Max. differential pressure, valve closed, depends on temperature as shown in the diagram and is valid for all sizes. Max. differential pressure for control service and sizes DN 100-500 depends on size and temperature as shown in the diagram.

Valves with PTFE-seat is further limited as shown in the diagram.

Operating torque

The minimum design torque for selecting the actuator is stated in the table for a differential pressure of 3 bar. The specified torques are for clean media. For steam increases the torque in above table with 20%. For pulp and other media containing solids consult your NAF representative.

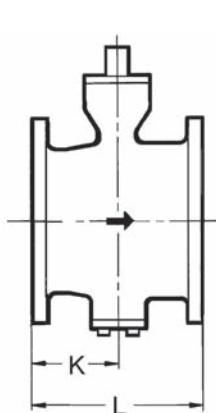

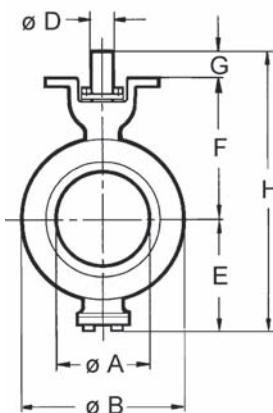

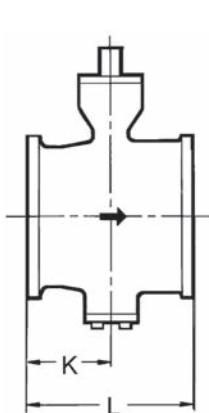

Sizing of control valves

We have a valve calculation program which is advanced but very easy to use. This program can be ordered through your NAF representative.

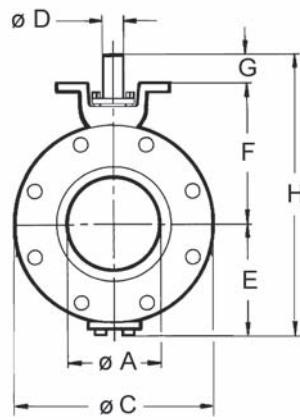

The program is based on the calculating formula according to the standards IEC 543, ISA 575.01 and VDMA 24422.

1) Including NAF valve positioner

2) DN 25—200 Wafer version

DN 250—500 Flanged version, PN 10.

Accessories

NAF's pneumatic actuators, see data sheet Fk74.59 can be equipped with a large number of accessories.

The following are included in NAF's standard programme and are suitable for direct mounting to NAF pneumatic actuators.

Valve positioner

Pneumatic and electro-pneumatic valve positioner, see data sheet Fk41.82.

Intelligent valve positioner, see data sheet Fk41.85.

Solenoid valves

See data sheet Fk79.17.

Electrical position indication

See data sheet Fk79.10.

Terminal box

The actuator can be equipped with a junction box (part No. 349 20 930) of cast aluminium containing terminal blocks for connecting the solenoid valve and position sensors.

Fugitive emissions Approval, EN ISO15848-1

NAF has certified some of our valves with a new stem sealing, according to EN ISO 15848-1 (this new standard will replace the old TA-luft standard). The packing box solution is with a V-ring set. The new packing set is live loaded with spring cups and equipped with an o-ring above the stem packing. Following valves have been certified in the first test.

Classification according to test results is

ISO-FE BH - CC1 - SSA0 - t200°C PN25

Classification classes:

BH Tightness class B, test fluid Helium
CC1 20000 mechanical cycles, 2 thermal cycles.
SSA0 Without shaft seal adjustments during test
T200°C Temperature Class
PN25 Endurance Class.

Certified Products

Wafer:

DN80-DN200

Flanged :

PN10 DN200 to DN300

PN16 DN80 to DN300

ANSI150 1" to 12"

PN25 DN200 to DN300

For other sizes and pressure classes contact NAF.

Product code: i.g 8780EB-0100-0B

Code	Seat sealing	Stem sealing
B	PTFE	Safeguard

Other versions

- Stem seal in other materials

For temperatures up to 250°C the standard O-rings item 13 and 15 as per Fk 41.51GB can be replaced by PFM, Isolast®. For higher temperatures, contact NAF.

Product code K

- Degreased version for oxygen

Before assembly, all valve parts are degreased in trichlorethylene vapour. The valve is assembled and packaged so that no oil or grease will enter the valve.

Product code D

- Stem sealing for vacuum

For vacuum the stem sealing O-rings kit is turned to be tight against the pressure from the outside.

For applications with alternating vacuum/overpressure is the overpressure limited to 2 bar.

Product code V

- Internal O-rings for sealing the stem from the medium

For media containing small, hard solid particles (such as those in flue gases, powders, granulates), and media which can crystallize in narrow slits. Those media can penetrate into the stem seal and give rise to increased actuating torque or increased ware.

O-ring seals are arranged between the body and the body side of stem.

Product code I

- Explosive atmosphere according to Direktive 94/9/EC ATEX

NAF-Setball is certified according to ATEX 94/9/EC  II 2 G/D c

Product code: XA

- Fire-safe

- For flanges according to JIS 10K

- Enlarged outlet

- Titanium version

Contact NAF for further information.
